

## Comparison Between CasaDigi and other integration Platforms Like Crestron, RTI, Elan Etc.

S.no	Point of Differentiation	CasaDigi	Others	Advantage
1	<b>User Interface</b>	Casadigi has a customizable, award winning User Interface, which is language free, and enables all members of the household to seamlessly use the app without any prerequisite for adaptiveness to technology.	User Interface is to be designed by the Integrator. The interface depends on the level of effort, finance and resources deployed by an integrator and how well a solution designer understands the requirement of the client. It should ideally be based on a comprehensive assesment by the integrator, which is not very common in the south asian subcontinent.	CasaDigi
2	<b>Technology</b>	Incorporates state of the art Consumer Electronic Control to have bi-directional interface with utilities like TVs, Av Receivers and Tatasky HD. There is no need for IR Probes on the surface of these objects	Uses Infra-Red Technology to control TataSky HD, TVs and most AV Receivers. IR Offers NO FEEDBACK. This means that there will be no live indication on the ipad if tv is turned on manually from the TV Unit.	CasaDigi
3	<b>Airconditioner Control</b>	Airconditioners Like VRV Acs can be controlled on RS 232 Interface with Bidirectional Control. The Interface is Graphic Based, without any buttons on the screen.	Airconditioners Like VRV Acs can be controlled on RS-232 Interface with Bidirectional Control. The Interface is resembles the remote of an Airconditioner.	Both Equal, although User Interface is Different
4	<b>Lighting Control</b>	Two Way Control with Lutron Lighting Control Systems.	Two Way Control with Lutron Lighting Control Systems.	Both Equal
5	<b>Lighting Interface</b>	Ability to add a Panoramic image of the actual bedroom, with horizontal scrolling offering both lighting and scene control	User Interface can have image of the room, Although Most processors do not have option to add panoramic view, horizontal scrolling and circuit and scene control o the same page.	CasaDigi
6	<b>Individual User Login</b>	Login Can be created so that the user interface and Favourites can be created for each independent stakeholder in the residence.	Not All Processors can support this. Most Integrators do not go into the details of this kind	CasaDigi

7	<b>Music On Demand</b>	<p>CasaDigi has its own Media Player, which enables the client to play music from an onboard Network Accessed Storage through the same app seamlessly. Music is cataloged automatically. Adding Zones and Selecting Volume controls for Each Zone is the added Advantage, which can be done on the fly-right-from the Ipad. Also, Playlists can be created by simply dragging and dropping.</p>	<p>3rd Party Media Players can be added, but typical solutions do not offer automatic Cataloging. Zoning and Volume Controls require another 3rd party Matrix Switcher. Using 3 Different Devices (Media Player, Matrix Switcher, and an Integration to play music makes this solution a Bit Slow and Laggy. A Solution that works as smoothly as Casadigi - Which is Kaleidescape, is more expensive than the CasaDigi Media Player and has no Local Support in India.</p>	CasaDigi
8	<b>Movies on demand</b>	<p>Same As Above. But CasaDigi can play 4K Formats, has the ability to Decode Dolby Atmos and 3D Movies with 3D Audio</p>	<p>Same As Above. Cannot Play 4K and Dolby Atmos unless used with Kaleidescape</p>	CasaDigi
9	<b>Content Ingestion</b>	<p>Content Can be Ingested Wirelessly. Also, A Blue Ray or DVD can be placed in the player and is automatically stored in the server, so that the movie can be accessed using the Ipad without the need to get up and change discs.</p>	<p>NOT POSSIBLE wirelessly and discs CANNOT be ripped using Kaleidescape.</p>	CasaDigi
10	<b>Apple Airplay Support</b>	<p>Airplay Support - to Play Music directly from the IPhone using apps Like Apple Music. Zoning and Volume controls can be then chosen seamlessly using the app.</p>	<p>NO Airplay Support Natively on Most Processors. Can be done by attaching an apple TV. BUT, the latest Apple TV Cannot be controlled by Automation systems.</p>	CasaDigi

**INTEGRATION  
PLATFORM**

CasaDigi, as a solution is an automation platform which is expandable and upgradable. Firstly the interface is customized with preferences for each user. When Solutions are designed to work according to the homeowner, they rarely become obsolete. Also, if a client chooses the Premium Support Contract with CasaDigi, the hardware and software will be automatically upgraded as and when the platform gets updated. Hence it is upgradable and expandable.

Client buys a processor. New Processor may not be compatible with existing wiring. No Company offers upgrades like this.

CasaDigi
